

# Brian Tran

Third-Year Computer Science Student at the University of Virginia

Top Secret Security Clearance

briantra23@gmail.com — 571-417-0029 — Ashburn, Virginia — LinkedIn — Portfolio

Full-stack developer experienced in building and deploying stateful web applications. Strong background in TypeScript, React, Next.js, REST APIs, PostgreSQL, and containerized deployments.

## Education

### University of Virginia

2024 - Spring 2028

Bachelor of Science in Computer Science — Minor in Applied Mathematics

GPA: 3.64

Relevant Courses: Software Development, Computer Systems, Natural Language Processing

## Skills

*Languages:* Python, TypeScript/JavaScript, Java, SQL, HTML/CSS

*Frameworks:* React, Next.js, Django, FastAPI

*Tools/Technologies:* PostgreSQL, Docker, AWS EC2, AWS S3, Git, Selenium, Prisma

## Experience

### North Point Technology, LLC

Reston, VA

*Full-stack Intern*

May 2026 – August 2026

- Built and deployed a full-stack metrics and data tracking platform using Next.js, Prisma, and PostgreSQL, serving 80+ employees; developed dynamic form builders and data visualization dashboards.
- Implemented Microsoft Entra ID authentication with OAuth 2.0 and role-based access control to secure enterprise applications and data.
- Built CI/CD pipelines with GitHub Actions; containerized and deployed the application to AWS EC2 using Docker.
- Developed a React single-page application and FastAPI backend integrating with enterprise APIs; deployed the frontend via AWS S3/CloudFront and backend via AWS Lambda with MSAL authentication and JWT verification.

*Software Engineer Intern*

May 2024 – August 2024

- Designed an automated Python web-scraping pipeline using BeautifulSoup and Selenium to monitor job listings across 8 government contractors daily.
- Implemented proxy rotation and browser behavior simulation to improve scraping reliability against bot detection.
- Built an automated email notification service and deployed the pipeline to AWS EC2, identifying 200+ new job listings over two months.

## Projects and Extracurriculars

### Cursor Dependency Risk Identifier

May 2026 - Present

*Extension Link*

- Built a TypeScript VS Code/Cursor extension that scans npm dependencies for security risks and displays results through a sidebar and package.json diagnostics.
- Integrated OSV.dev, npm Registry, and endoflife.date to identify vulnerabilities and recommend compatible dependency upgrades using semver and Cursor Agent.

### Full-Stack Web Developer

September 2024 - February 2026

*theCourseForum*

- Developed course and professor search and filtering features using Django and PostgreSQL, serving 40,000+ University of Virginia users.
- Implemented multi-criteria filtering and optimized database queries, reducing query latency by 20% and container CPU usage by 5% on AWS EC2.

### Graph-Representation of Naval Systems

February 2025 - July 2025

*Github Link*

- Collaborated with U.S. Navy stakeholders to design and build a graph-based application for modeling onboard computing infrastructure using React, Django, Django REST Framework, and PostgreSQL.
- Collaborated in a 5-person Agile team to plan, develop, and iterate on features based on feedback from U.S. Navy stakeholders.
- Developed RESTful APIs and backend validation pipelines to process incomplete data before database storage; presented the project at UVA's First Year Engineering Expo, earning 3rd place.
